Chapter 1

Hierarchical Index

1.1 Class Hierarchy

This inheritance list is sorted roughly, but not completely, alphabetically:

QObject	
CanHandler	7
CanReader	60

Chapter 2

Class Index

2.1 Class List

Here are the classes, structs, unions and interfaces with brief descriptions:

CanHandler		7
CanReader		60

Chapter 3

File Index

3.1 File List

Here is a list of all files with brief descriptions:

src/ main.cpp	71
src/can/ canhandler.h	63
src/can/ CanReader.cpp	69
src/can/ CanReader.h	69

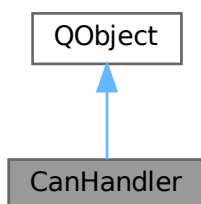

Chapter 4

Class Documentation

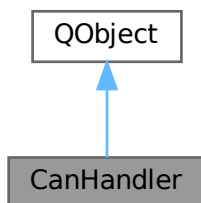

4.1 CanHandler Class Reference

```
#include <canhandler.h>
```

Inheritance diagram for CanHandler:

Collaboration diagram for CanHandler:

4.1.1 Constructor & Destructor Documentation

4.1.1.1 CanHandler()

```
CanHandler::CanHandler (
    QObject * parent = nullptr ) [inline], [explicit]
```

4.1.2 Member Function Documentation

4.1.2.1 absActive()

```
bool CanHandler::absActive ( ) const [inline]
```

4.1.2.2 absChanged

```
void CanHandler::absChanged ( ) [signal]
```

4.1.2.3 acActive()

```
bool CanHandler::acActive ( ) const [inline]
```

4.1.2.4 acChanged

```
void CanHandler::acChanged ( ) [signal]
```

Here is the caller graph for this function:

4.1.2.5 altCharging()

```
bool CanHandler::altCharging ( ) const [inline]
```

4.1.2.6 anyDoorOpen()

```
bool CanHandler::anyDoorOpen ( ) const [inline]
```

4.1.2.7 batteryVoltage()

```
double CanHandler::batteryVoltage ( ) const [inline]
```

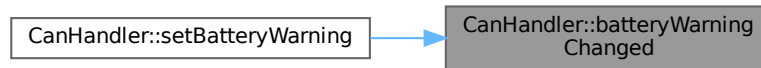

4.1.2.8 batteryWarning()

```
bool CanHandler::batteryWarning ( ) const [inline]
```

4.1.2.9 batteryWarningChanged

```
void CanHandler::batteryWarningChanged ( ) [signal]
```

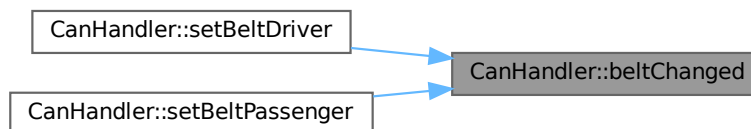

Here is the caller graph for this function:

4.1.2.10 beltChanged

```
void CanHandler::beltChanged ( ) [signal]
```

Here is the caller graph for this function:

4.1.2.11 beltDriver()

```
bool CanHandler::beltDriver ( ) const [inline]
```

4.1.2.12 beltPassenger()

```
bool CanHandler::beltPassenger ( ) const [inline]
```

4.1.2.13 blinkerChanged

```
void CanHandler::blinkerChanged ( ) [signal]
```

Here is the caller graph for this function:

4.1.2.14 blinkerStatus()

```
int CanHandler::blinkerStatus ( ) const [inline]
```

4.1.2.15 brakeChanged

```
void CanHandler::brakeChanged ( ) [signal]
```

Here is the caller graph for this function:

4.1.2.16 brakePressed()

```
bool CanHandler::brakePressed ( ) const [inline]
```

4.1.2.17 buildDate()

```
QString CanHandler::buildDate ( ) const [inline]
```

4.1.2.18 busComfortActive()

```
bool CanHandler::busComfortActive ( ) const [inline]
```

4.1.3.39 ignitionOn

```
bool CanHandler::ignitionOn [read], [write]
```

4.1.3.40 interiorLight

```
bool CanHandler::interiorLight [read], [write]
```

4.1.3.41 isLocked

```
bool CanHandler::isLocked [read], [write]
```

4.1.3.42 lastFaultCode

```
QString CanHandler::lastFaultCode [read], [write]
```

4.1.3.43 limpMode

```
bool CanHandler::limpMode [read], [write]
```

4.1.3.44 lowBeam

```
bool CanHandler::lowBeam [read], [write]
```

4.1.3.45 mileage

```
double CanHandler::mileage [read]
```

4.1.3.46 overheat

```
bool CanHandler::overheat [read], [write]
```

4.1.3.47 pedalPos

```
int CanHandler::pedalPos [read], [write]
```

4.1.3.48 posLights

```
bool CanHandler::posLights [read], [write]
```

4.1.3.49 rangePossible

```
int CanHandler::rangePossible [read], [write]
```

4.1.3.50 rpm

```
int CanHandler::rpm [read], [write]
```

4.1.3.51 speed

```
int CanHandler::speed [read], [write]
```

4.1.3.52 steeringAngle

```
double CanHandler::steeringAngle [read], [write]
```

4.1.3.53 tempAmbient

```
double CanHandler::tempAmbient [read], [write]
```

4.1.3.54 tempCoolant

```
double CanHandler::tempCoolant [read], [write]
```

4.1.3.55 tempFuel

```
double CanHandler::tempFuel [read], [write]
```

4.1.3.56 tempIntake

```
double CanHandler::tempIntake [read], [write]
```

4.1.3.57 tempOil

```
double CanHandler::tempOil [read], [write]
```

4.1.3.58 throttlePos

```
int CanHandler::throttlePos [read], [write]
```

4.1.3.59 torqueActual

```
double CanHandler::torqueActual [read], [write]
```

4.1.3.60 torqueRequest

```
double CanHandler::torqueRequest [read], [write]
```

4.1.3.61 tractionActive

```
bool CanHandler::tractionActive [read], [write]
```

4.1.3.62 trunk

```
bool CanHandler::trunk [read], [write]
```

4.1.3.63 vin

```
QString CanHandler::vin [read]
```

4.1.3.64 wheelFL

```
double CanHandler::wheelFL [read], [write]
```

4.1.3.65 wheelFR

```
double CanHandler::wheelFR [read], [write]
```

4.1.3.66 wheelRL

```
double CanHandler::wheelRL [read], [write]
```

4.1.3.67 wheelRR

```
double CanHandler::wheelRR [read], [write]
```

4.1.3.68 windowPos

```
int CanHandler::windowPos [read], [write]
```

4.1.3.69 windshieldHeater

```
int CanHandler::windshieldHeater [read], [write]
```

4.1.3.70 wiperLevel

```
int CanHandler::wiperLevel [read], [write]
```

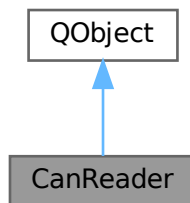

The documentation for this class was generated from the following file:

- [src/can/canhandler.h](#)

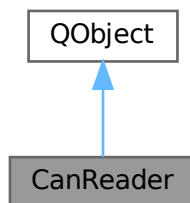

4.2 CanReader Class Reference

```
#include <CanReader.h>
```

Inheritance diagram for CanReader:

Collaboration diagram for CanReader:

Signals

- void `busConnected` ()
- void `busDisconnected` ()
- void `busError` (const QString &errorString)

Public Member Functions

- `CanReader` (`CanHandler` *handler, `QObject` *parent=nullptr)
- bool `connectToBus` (const QString &interfaceName="can0")
- void `disconnect` ()

4.2.1 Constructor & Destructor Documentation

4.2.1.1 CanReader()

```
CanReader::CanReader (
    CanHandler * handler,
    QObject * parent = nullptr ) [explicit]
```

4.2.2 Member Function Documentation

4.2.2.1 busConnected

```
void CanReader::busConnected ( ) [signal]
```

Here is the caller graph for this function:

4.2.2.2 busDisconnected

```
void CanReader::busDisconnected ( ) [signal]
```

Here is the caller graph for this function:

4.2.2.3 busError

```
void CanReader::busError (
    const QString & errorString ) [signal]
```

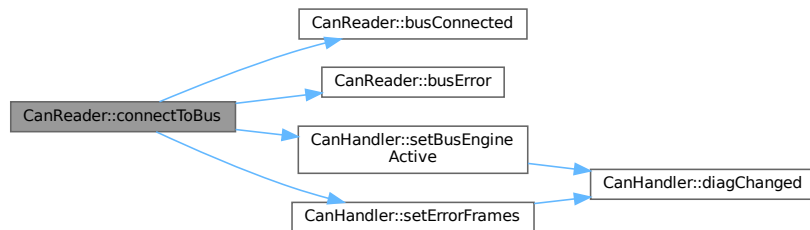

Here is the caller graph for this function:

4.2.2.4 connectToBus()

```
bool CanReader::connectToBus (
    const QString & interfaceName = "can0" )
```

Here is the call graph for this function:

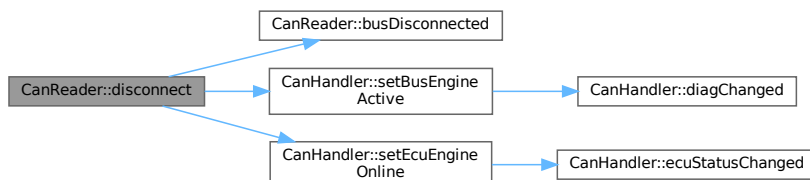

Here is the caller graph for this function:

4.2.2.5 disconnect()

```
void CanReader::disconnect ( )
```

Here is the call graph for this function:
